“ Forkylevel ” assists the forklift drivers
to gain SAFETY and PRODUCTIVITY

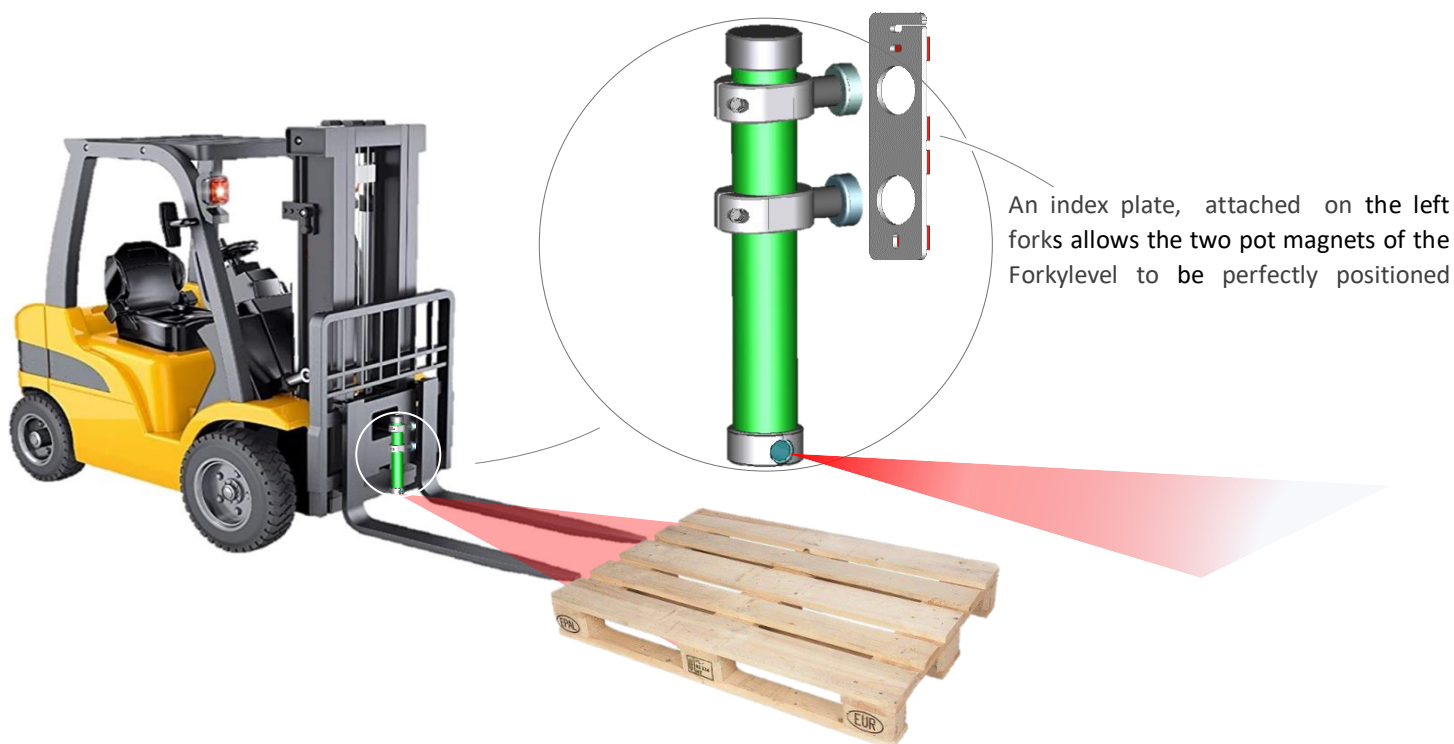

Safety at all levels
Forkylevel

How Forkylevel works

Forkylevel is an autonomous forklift driver assistance device which is installed on the left fork of the forklift. This device projects a flashing light line on the pallet. The line which is in the fork's arms plane is only activated if the forks are perfectly horizontal. Thus, the Forkylevel indicates to the driver both the forks' entry height and the forks' level.

2 functions

- The forks' entry height (± 2 mm)
- The forks' level ($\pm 0.2^\circ$)

An index plate, attached on the left forks allows the two pot magnets of the Forkylevel to be perfectly positioned

Forkylevel characteristics

- Universal, suitable for all types of forklifts
- Easy and fast installation: 10 mn
- Perfectly visible flashing light line
- Removable: fixation by indexed pot magnets
- Long battery life: 100 hours
- Robust, cushioned, and waterproof (IP68)
- Protected by the fork
- High-tech electronics
- No wiring to the forklift

Why choose Forkylevel

- ✓ Increases the safety and the working conditions
- ✓ Gives the driver more precision and insurance
- ✓ Reduces the products damage
- ✓ Reduces the equipment damage
- ✓ Saves time

Fast return on investment
